

# SOLUTIONS FOR EVERY SCENARIO.

---

Whether your patient is struggling to conceive naturally, dealing with genetic factors, facing the implications of cancer treatment, or just wishing time could stand still for a moment, Extend Fertility offers solutions for every scenario. We are proud to be the single largest egg freezing practice in the nation, offering services at 40% lower pricing than the average provider.

Extend Fertility believes in accessible care, which is why we work hard to remain in-network with many commercial insurance carriers. We understand that insurance may not be available for everyone, and that finances can be an unwanted burden on a path already full of stressors. Because of this, Extend Fertility offers transparent out-of-pocket fees, at much lower prices than traditional market cost.

Throughout your patient's journey with us, we will work to keep you in touch with their process, providing care summaries, next steps, and any incidental findings along the way. We work to make the referral process simple. Complete the referral form on our website, scan qr code at right, or call our office at 212-810-2828. Your patient may also complete their own form or call us directly.

## Consider patient referral for those who are (or have) the following:

### Age:

- Women over 35 trying for 6 months or more to conceive
- Women under 35 unable to conceive naturally for less than 1 year or more
- Fertility preservation, (egg or embryo preservation)
- Any person, at any age, concerned about a delay in conception

### Health History

- Known reproductive issues
- History of irregular menstrual cycles
- PCOS diagnosis
- Endometriosis diagnosis
- Presence of uterine fibroids
- Diminished ovarian reserve or POI
- Cancer diagnosis (fertility preservation)
- Thyroid conditions

- Known genetic issues
- Known genetic testing requiring preimplantation genetic testing
- Recurrent pregnancy loss
- History of tubal ligation or tubal obstruction
- Concerns with Male Factor Infertility

### Family Makeup:

- Same sex couples
  - Single mothers using donor sperm
  - Egg donation
  - Desire for gender selection for family balancing or medical reasons
- 

### Patient Referral:

Though you may refer a patient to us at any time without prior testing, we believe it is in everyone's best interest to conserve time, energy, and resources.

Please include results if your patient has had any of the following testing done in the last year:

- Hormonal testing
- HSG testing
- Semen analysis
- Any record of previous fertility treatment

We pride ourselves on delivering the most empowering path to fertility for our clients.

At Extend Fertility, we believe in the foundation of truth-based care, of peeling back the layers of fertility uncertainty and doubt through cutting-edge science and decades of experience. We offer the most protocols and procedures in a high-tech, cutting-edge laboratory, providing the expertise of a large academic program, but with the interpersonal, compassionate connection of a boutique practice.
